

Acute & Chronic Symptoms of Diabetes

Uncontrolled diabetes can cause an array of acute and chronic issues and symptoms. It is important to tackle the acute issues in order to help prevent the development of chronic issues.

Acute Symptoms	Chronic Symptoms
Blurry vision	Glaucoma
Numbness or tingling in hands or feet	Necrotic Tissue
Diabetic Ketoacidosis	Chronic Kidney Disease
Feeling very tired	End Stage Renal Failure
Dry Skin	Poor Wound Healing
Frequent Urination	Amputation
Unplanned Weight Loss or Gain	Blindness
Persistent Thirst	Death

If you are having persistent acute symptoms make sure to reach out to your healthcare team to get them under control.
